## DID YOU KNOW...

In 1910, American engineer Nathaniel Baldwin developed a model of headphones consisting of two sound receivers, each of which contained a coil of copper wires, attached to the headband on the operator's head and hidden in a leather strap. At that time, it was such a perfect model that the military ordered 100 pieces from Baldwin, although he could deliver headphones in small batches, produced on the kitchen table. If the stories are to be believed, his invention was born in a flash, and the inventor himself did not attach much importance to it at first. He didn't take care to patent it. He also refused when the Navy wanted to move production from a kitchen in Utah to a much larger facility on the East Coast. This was due to Baldwin's matrimonial problems - he was a polygamist and could not leave Utah. As a result, someone else took care of the production.

## DID YOU KNOW...

The charger works wirelessly on the principle of electromagnetic induction. Interestingly, the theoretical foundations were established in 1831 by Michael Faraday. He discovered the phenomenon of electromagnetic induction, i.e. the possibility of generating an electric current by the movement of a magnet. Faraday developed a theoretical concept of the current flow, which we can now use comfortably after 192 years with the available devices.

# WIRELESS CHARGER

An adapter with a micro USB connector for wireless charging of mobile devices.

09088

### Micro USB wireless charging receiver INDO

-  100 x 46 mm

**DID YOU KNOW...**

At the beginning of the 18th century, the Swedish naturalist Carl Linnaeus planted the first flower clock in the Botanical Garden in Uppsala, Sweden. He created a round flower bed divided into 12 parts. The whole thing was based on the characteristic hours of opening and closing of petals for different types of flowers, so you could determine the time of day just by looking at the garden. If you do not have this type of garden, wall clocks also work well.

# USB FLASH DRIVE

USB flash drives come with 5 years warranty and CE certificate.

All USB flash drives are sold without lanyards and boxes.  
Box and lanyard can be bought separately, p. 83

## DID YOU KNOW...

The history of flash drives goes back to the 1970s, when an employee of TOSHIBA, Dr. Fujio Masuoka, worked on the development of SAMOS memory. In the early 1980s, he introduced two types of NAND and NOR memories, today called FLASH memories, which in later years were popularized by Toshiba, Intel and Samsung. However, the Universal Serial Bus, popularly known as USB, which gained mass popularity in 1998, turned out to be necessary to fully use the functionality of Flash memory. In 2000, the first Flash drives connecting to computers via USB1.1 went on sale. Flash drives had a capacity of 8MB and competed with floppy disks that were very popular at the time.
